

Thermal Containment Environments

BESPOKE MODULAR SOLUTIONS

Modular construction, infinite flexibility

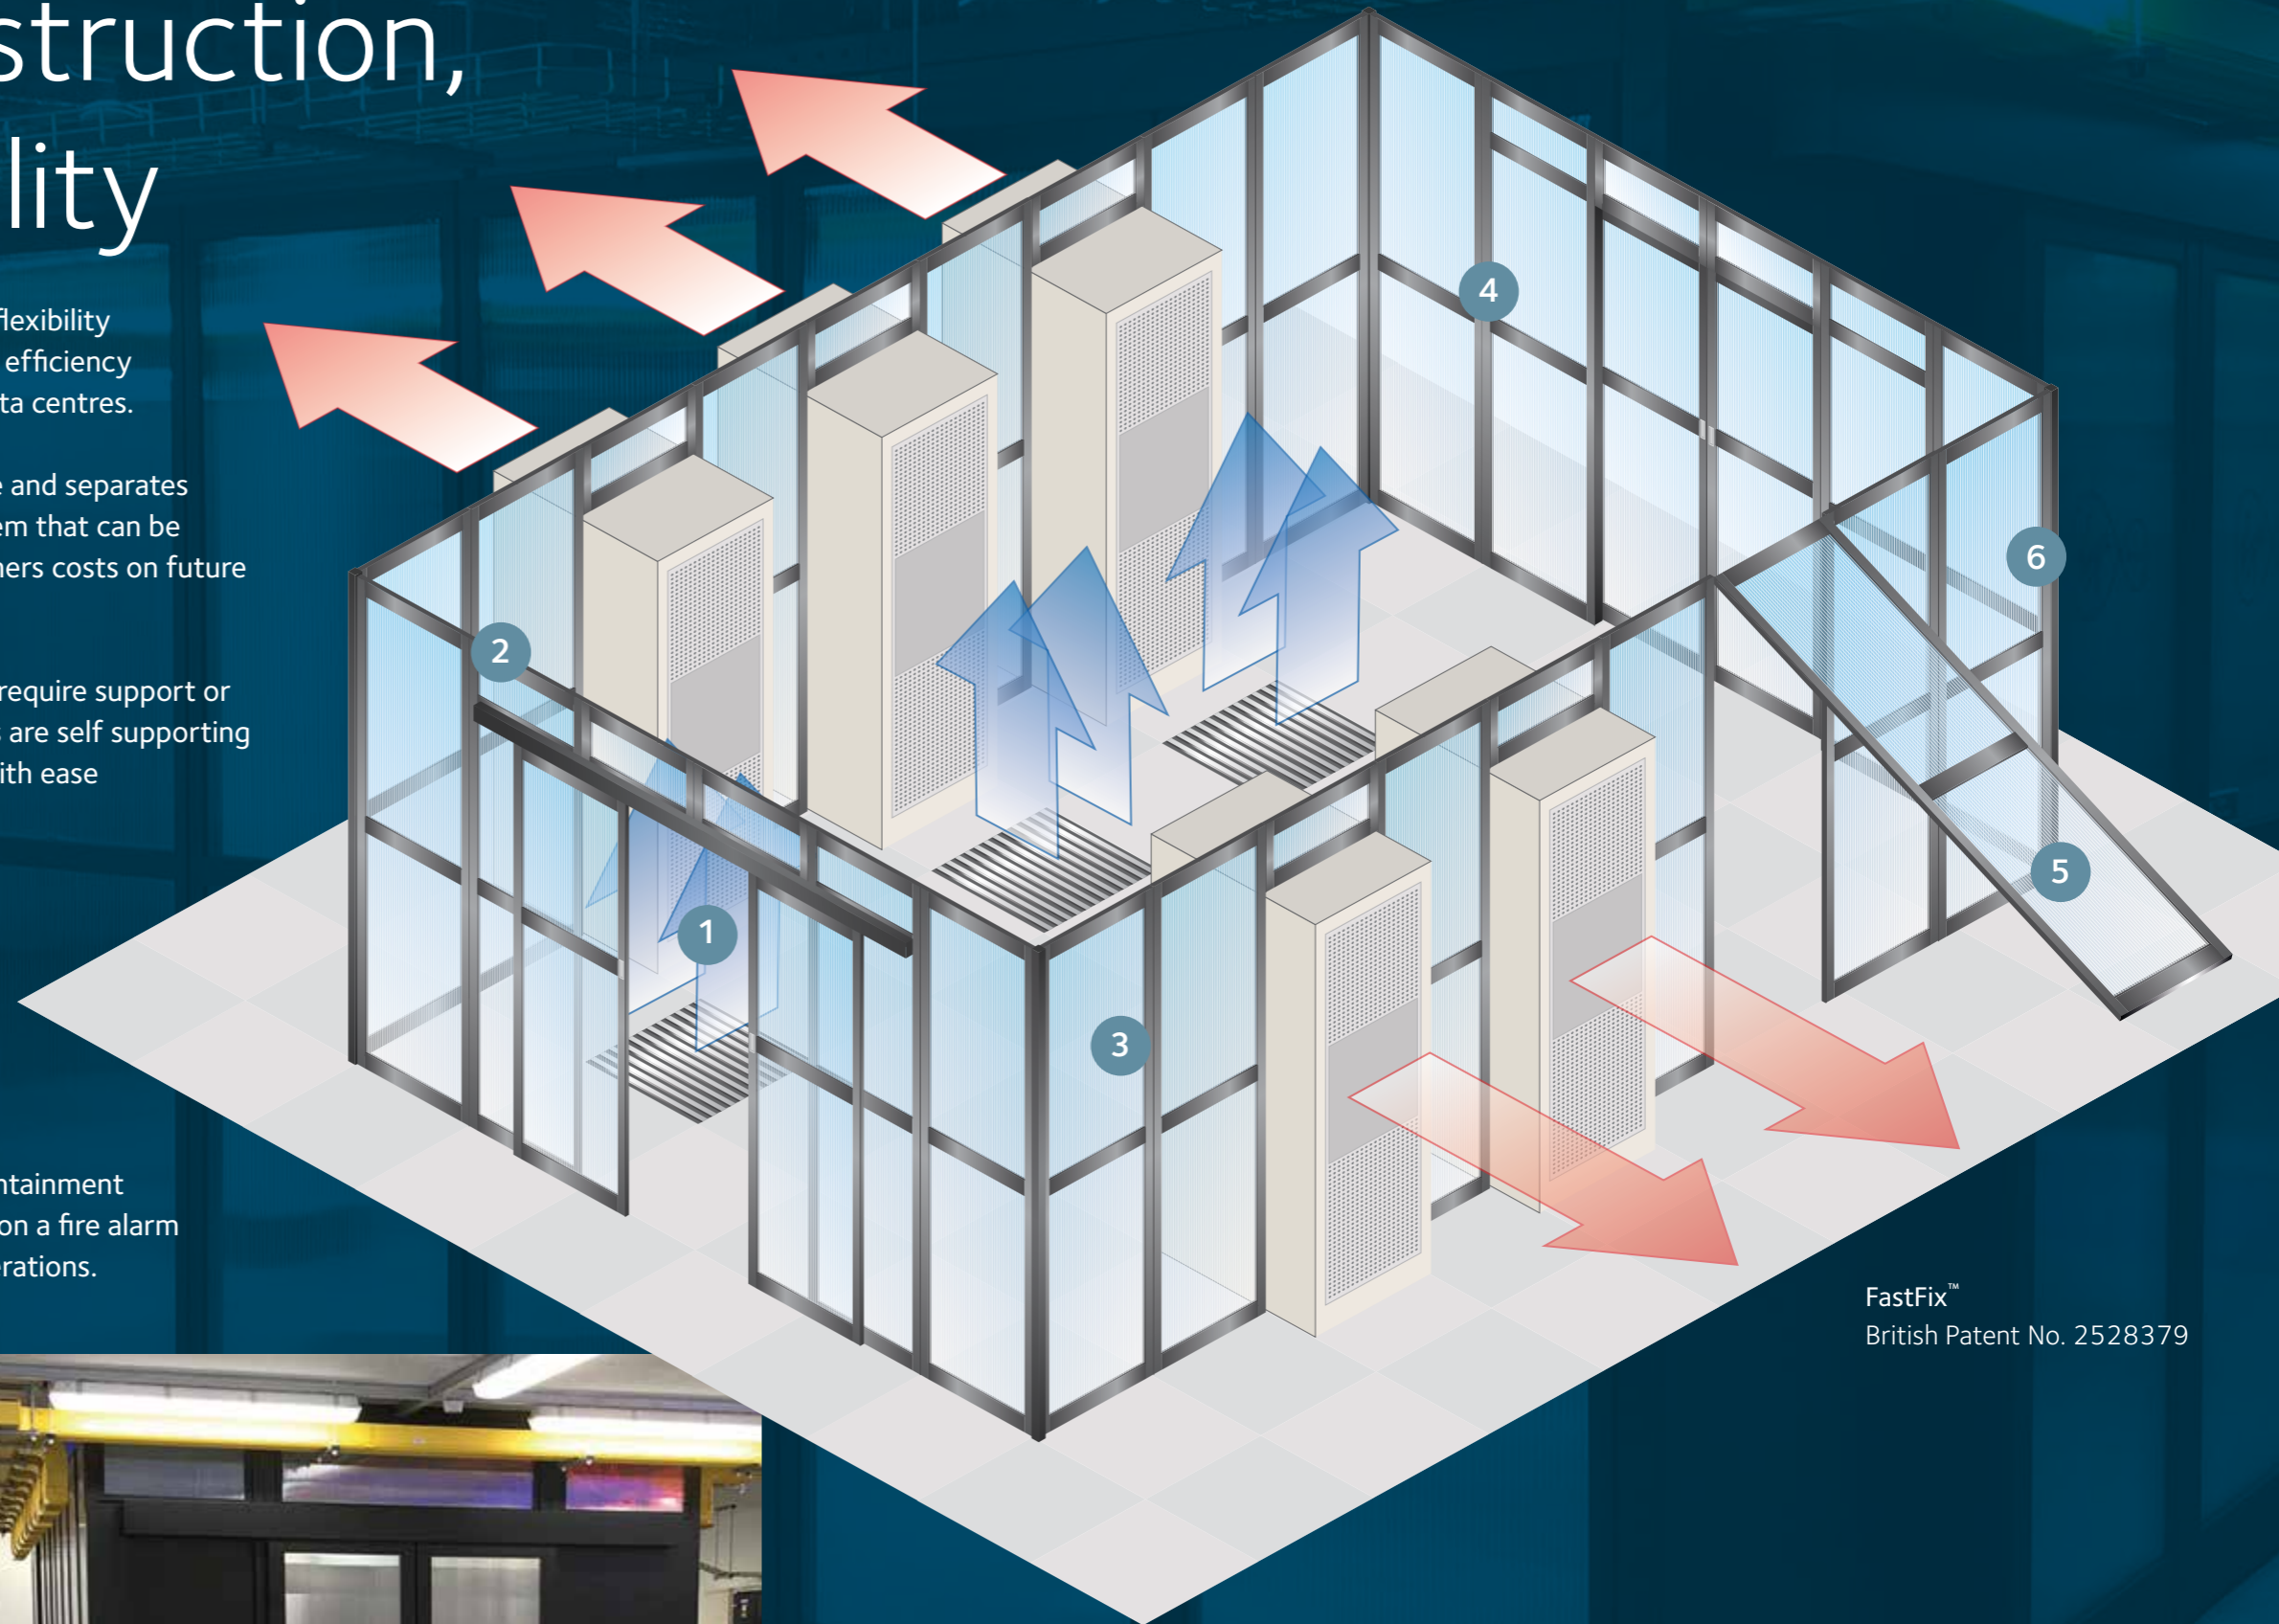

FastFix™ patented thermal containment offers high flexibility to facilities professionals looking to improve cooling efficiency and also reduce the resources consumed by their data centres.

We believe our FastFix™ system is completely unique and separates us from our competitors, it's a mobile reusable system that can be retrofitted again and again, reducing a single customer's costs on future projects.

Our system is designed in such a way that we don't require support or fixing from racks / units we are enclosing. Our aisles are self supporting meaning racks can be fitted, removed or replaced with ease without disturbing thermal containment.

FastFix™ thermal containment can be used with or without conventional raised floor cooling. It is easily retrofitted into an existing raised floor and works in tandem with the raised floor and the extreme density cooling systems to produce highly efficient cooling solutions.

Also available to work alongside FastFix™ thermal containment we offer retractable ceiling systems that slide open on a fire alarm signal minimizing costly fire suppressant system alterations.

FastFix™
British Patent No. 2528379

1 Low-profile Automatic or Semi Automatic sliding doors.

2 Unique light weight top track profile.

3 Aluminium framed, twin walled polycarbonate panels.

4 Textured polyester powder coating throughout.

5 Easy change, reusable sectional panels.

6 Durable Aluminium modular frame work.

Bespoke Secure Enclosures

Installation of our bespoke secure enclosures gives peace of mind that the infrastructure is not only secure, but is out of reach of vandals.

All enclosures are constructed of fully galvanised steel providing a long service life, we also install digital pass locks for service access so any authorised engineers can carry out works when required.
